# Notifications for Managing Bundled Payments

CMS and Medicaid are paying providers for episodes of care versus individual services.

Use Case: The facility wants to manage their overall bundled payment patients after initial discharge, by monitoring their ED and inpatient admissions through Event Notifications.

Project Details	Impact

- Leverage existing ADT feed to SDHL
- Subscribe to event-based notifications
- Identify patients pending re-admission for care management, admission prevention
- Upload post surgical patient list

- New improved workflow promotes better care
- Better outcomes
- Maximized reimbursement
